

Is your oak Oregon white oak?

Our native oak, Oregon white oak (*Quercus garryana*), is a valuable habitat species, but is often confused with other oak species.

Most often confused with Northern red oak

Oregon white oak
Quercus garryana

- short hairs make leaf underside felty to the touch
- winter buds have reddish hairs

English oak
Quercus robur

- leaf underside is smooth
- winter buds do not have hairs

Other oaks

Several other oak species have pointed lobes with bristle-like points on the lobes of the leaves.
