

47 Million Americans Rely on Well Water

More than 15 million private wells provide the primary source of drinking water to 15% of the US population. A majority of well owners don't know how to care for their well or determine if their water is safe to drink.

PRIVATEWELLCLASS.ORG

PrivateWellClass.org helps busy homeowners learn how to care for their private drinking water well by providing training and technical assistance via the Internet. This effort supplements the critical work performed on the ground by environmental health professionals.

- Free 10-lesson email course
- Monthly live webinars
- Audio and video materials
- Extensive resource library

PrivateWellClass.org is a collaboration between the Rural Community Assistance Partnership and the University of Illinois, through the Illinois State Water Survey and the Illinois Water Resources Center, and funded by the U. S. Environmental Protection Agency.
